

People with blockages in the heart and other blood vessels of those who have no symptoms despite the blockage

Nobel prize winning scientist Linus Pauling has explained about knowing and balancing various micronutrients in the body in the right amounts to maintain health. Research has indicated that Ortho molecular medicine helps to maintain this balance.

MOAT (Metastatic Orthomolecular Amino Complex Therapy)

It is a method of protecting the heart and blood vessels, like building a MOAT around fort. Similarly to eliminate the unnecessarily accumulated fat deposited in the Clogged blood vessels EDTA (Ethylene Diamine Tetra Acetic Acid) is given. In this way the blood flow to the heart is established without any hindrance thereby rejuvenating the entire system.

ATHEROSCLEROSIS (Fat accumulation in the blood vessel)

We all know the hidden enemy is fat deposited in the blood vessels leading to heart attack and stroke in the brain. MOAT is an excellent method that dissolves the fat easily and steadily removing it to restore blood flow to the blood vessels.

The treatment method is to remove the blockage with medicine without surgery, and eating holistic healthy heart friendly fat free diet, Lifestyle modifications prevents reaccumulation of fat deposits in the blood vessels.

By this we get the following benefits

1. Prevention and elimination of fatty deposits in the blood vessels.
2. Increasing Longevity
3. Staying healthy and energetic lifelong

How MOAT Works?

According to the patients body weight, BMI fat mass, the dosage of EDTA and other given medicines vary. These act by absorbing the fat accumulated in the blood vessels blocking the heart and eliminating the harmful metallic compounds found in the blood stream, detoxifying the system thereby giving a rejuvenated feel in our body.

It protects the endothelial cells of the blood vessels and prevents blockage with fat deposits and allows blood to flow smoothly in the blood vessels throughout our body. EDTA given is calculated accordingly depending on the heart and kidney function.

How healthy is MOAT? Paving way for life?

1. Inhibits clotting blood vessel
2. Protects the endothelial cells of the blood vessel and restores the smoothness, preventing the deposition of fat.
3. The drugs infused flushes out the metallic and toxic wastes from the blood stream.
4. Blood flow is restored in the blood vessels.
5. Moat, improves nervous disorders and impotence, Thereby it rejuvenates the system.

How safe is EDTA and other given drugs?

Countries like USA, England, France, Germany, Switzerland, etc are following this Calculation based on heart and kidney function with no side effects.

Do you need to stay in the hospital as in - patient?

A 3 – 4 Hours stay in the hospital will Suffice.

Can you consume your regular medications while undergoing MOAT Therapy?

You can take your regular diabetic, hypertension, cancer medications as usual if any, without any fear.

Who will benefit from MOAT?

1. People with Myocardial infarction
2. People with leg pain and having cramps while walking.
3. People with shortness of breath / shortness of breath after walking for a short distance or while doing small chores.
4. Those who have been diagnosed with Myocardial Infarction and are not suitable for surgery.
5. People suffering from cerebro vascular occlusion

Is MOAT Affordable?

Yes !....It's an affordable treatment benefiting everyone and it is cost effective compared to Bypass Surgery /Angioplasty / Stent.
